

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Original) A display device comprising:

91 a pair of substrates which face each other and at least one of which transmits light;
a spacer sandwiched between the pair of substrates; and
two types of particles of different colors and different electric characteristics all sealed in an inner space formed by the pair of substrates and the spacer, wherein the inner space is hermetically sealed up.

2. (Original) The display device as claimed in claim 1, wherein the spacer is formed on one of the pair of substrates, and is fixed to the other substrate with a resin.

3. (Original) The display device as claimed in claim 1, wherein the space formed by the outer surface of the spacer and the pair of substrates is filled with a resin.

4. (Original) The display device as claimed in claim 1, wherein an elastic member is forcedly inserted into the space formed by the outer surface of the spacer and the pair of substrates.

5. (Original) The display device as claimed in claim 1, wherein the spacer is formed on one of the pair of substrates, and an elastic member is put between one end of the spacer adjacent to the other substrate and the other substrate.

92 6. (New) The display device as claimed in claim 1, wherein one of the two types of particles is electroconductive and the other of the two types of particles is insulating.

7. (New) The display device as claimed in claim 1, wherein the two types of particles have a particle size from 1 μ m to 1000 μ m.

8. (New) The display device as claimed in claim 7, wherein the two types of particles have a particle size from $5\mu\text{m}$ to $50\mu\text{m}$.

9. (New) The display device as claimed in claim 1, wherein the particles move to one or the other of the pair of substrates when an electric field is applied between the two substrates.

10. (New) The display device as claimed in claim 1, wherein the display device is electrophoretic.

11. (New) The display device according to claim 1, wherein the particles are triboelectrically charged to form an image.
